***Allowable Subject Matter***

1. Claims 1-10 are allowed.

The following is the examiner's statement of reasons for allowance:

The closest prior arts, **Asakura** (US Patent No. 6,933,369) and **Lou** (US Pub No 2000/0176571) disclose a phone holder but fail to anticipate or render<sup>obvious</sup> the following underlined limitations "wherein the first and second sidewalls respectively comprise a protruding element protruding towards the inside portion of the holding structure and adapted to engage into respectively apertures of the hinge means of the mobile phone".

Therefore, the independent **claims 1 and 9** are allowed because the prior arts of record fail to teach or suggest the above underlined limitations in combination with the remaining italicized limitations.

1. Regarding claims 2-8 and 10, the claims are allowed as being dependent on claims 1 and 9 respectively.

2. *Claim 1, a holder for a clamshell-type mobile phone with a first part and a second part connected to each other and foldable onto each other between a flipped-open state and a flipped-close state by a hinge means, the holder comprising: a holding structure having first and second opposing sidewalls for releasably holding the first part of the mobile phone, the holding structure having a lower sidewall between the first and second sidewalls with a connector configured to releasably connect to a corresponding*

*connector of the mobile phone, the first, second and lower sidewalls together defining an inside portion of the holding structure, wherein the first and second sidewalls respectively comprise a protruding element protruding towards the inside portion of the holding structure and adapted to engage into respectively apertures of the hinge means of the mobile phone.*

3. *Claim 9, a holder and clamshell-type mobile phone assembly, the assembly comprising: a clamshell-type mobile phone with a first part and a second part connected to each other and foldable onto each other by a hinge means, a holder comprising a holding structure having first and second opposing sidewalls configured to releasably hold the first part of the mobile phone, the holding structure having a lower sidewall with a connector configured to connect to a corresponding connector of the mobile phone, the first, second and lower sidewalls together defining an inside portion of the holding structure, wherein the first and second opposing sidewalls respectively comprise a protruding element protruding towards the inside portion of the holding structure, wherein the hinge means of the mobile phone comprises apertures into which the protruding elements of the holder are configured to engage upon and releasably connect the mobile phone to the holder.*
